

DHEIS — District Health & Education Intelligence System

Integrated Analytics for Evidence-Based Priority Identification

Integrates district-level health and education data to identify priority districts, understand major needs, and support data-driven planning.

The Problem

District health and education data are fragmented and inconsistent.

Combining data is difficult; data quality risks undermine conclusions.

Unclear which driver (health or education) should take precedence.

Raw indicators don't translate into actionable priorities.

Central question: Which districts need greater attention, and why?

Why This Matters & Who Benefits

WHERE?

Which districts have higher priority?

WHY?

Which indicators drive the priority?

WHAT TO FOCUS ON?

Which areas require greater attention?

WHO BENEFITS

Public Administration

district prioritization
& resource planning

Health Planners

identify health-related
concerns

Education Planners

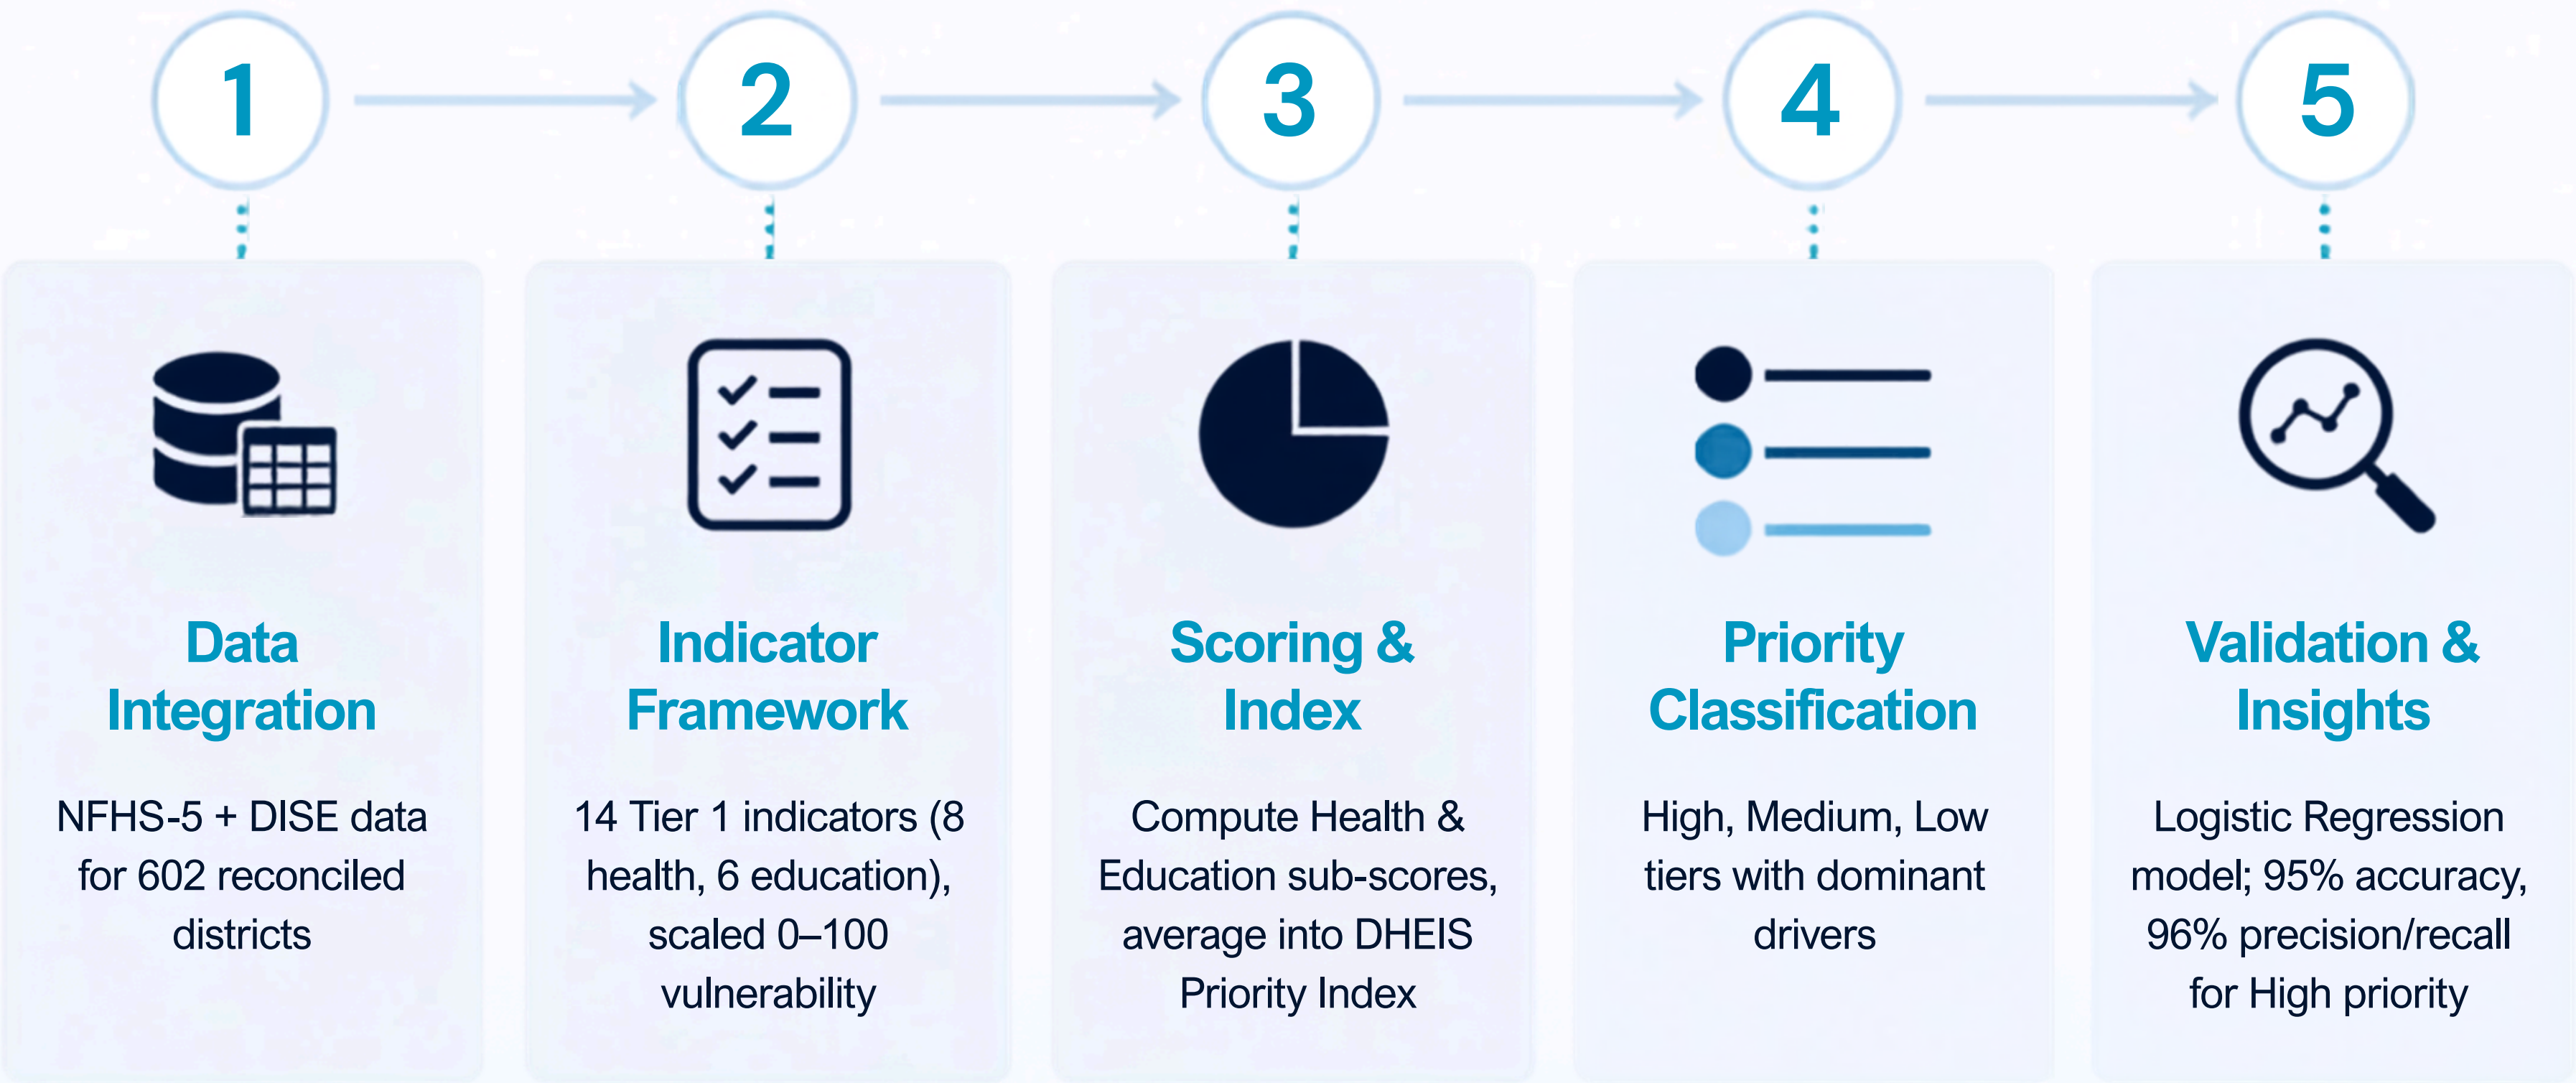

identify education-related
gaps

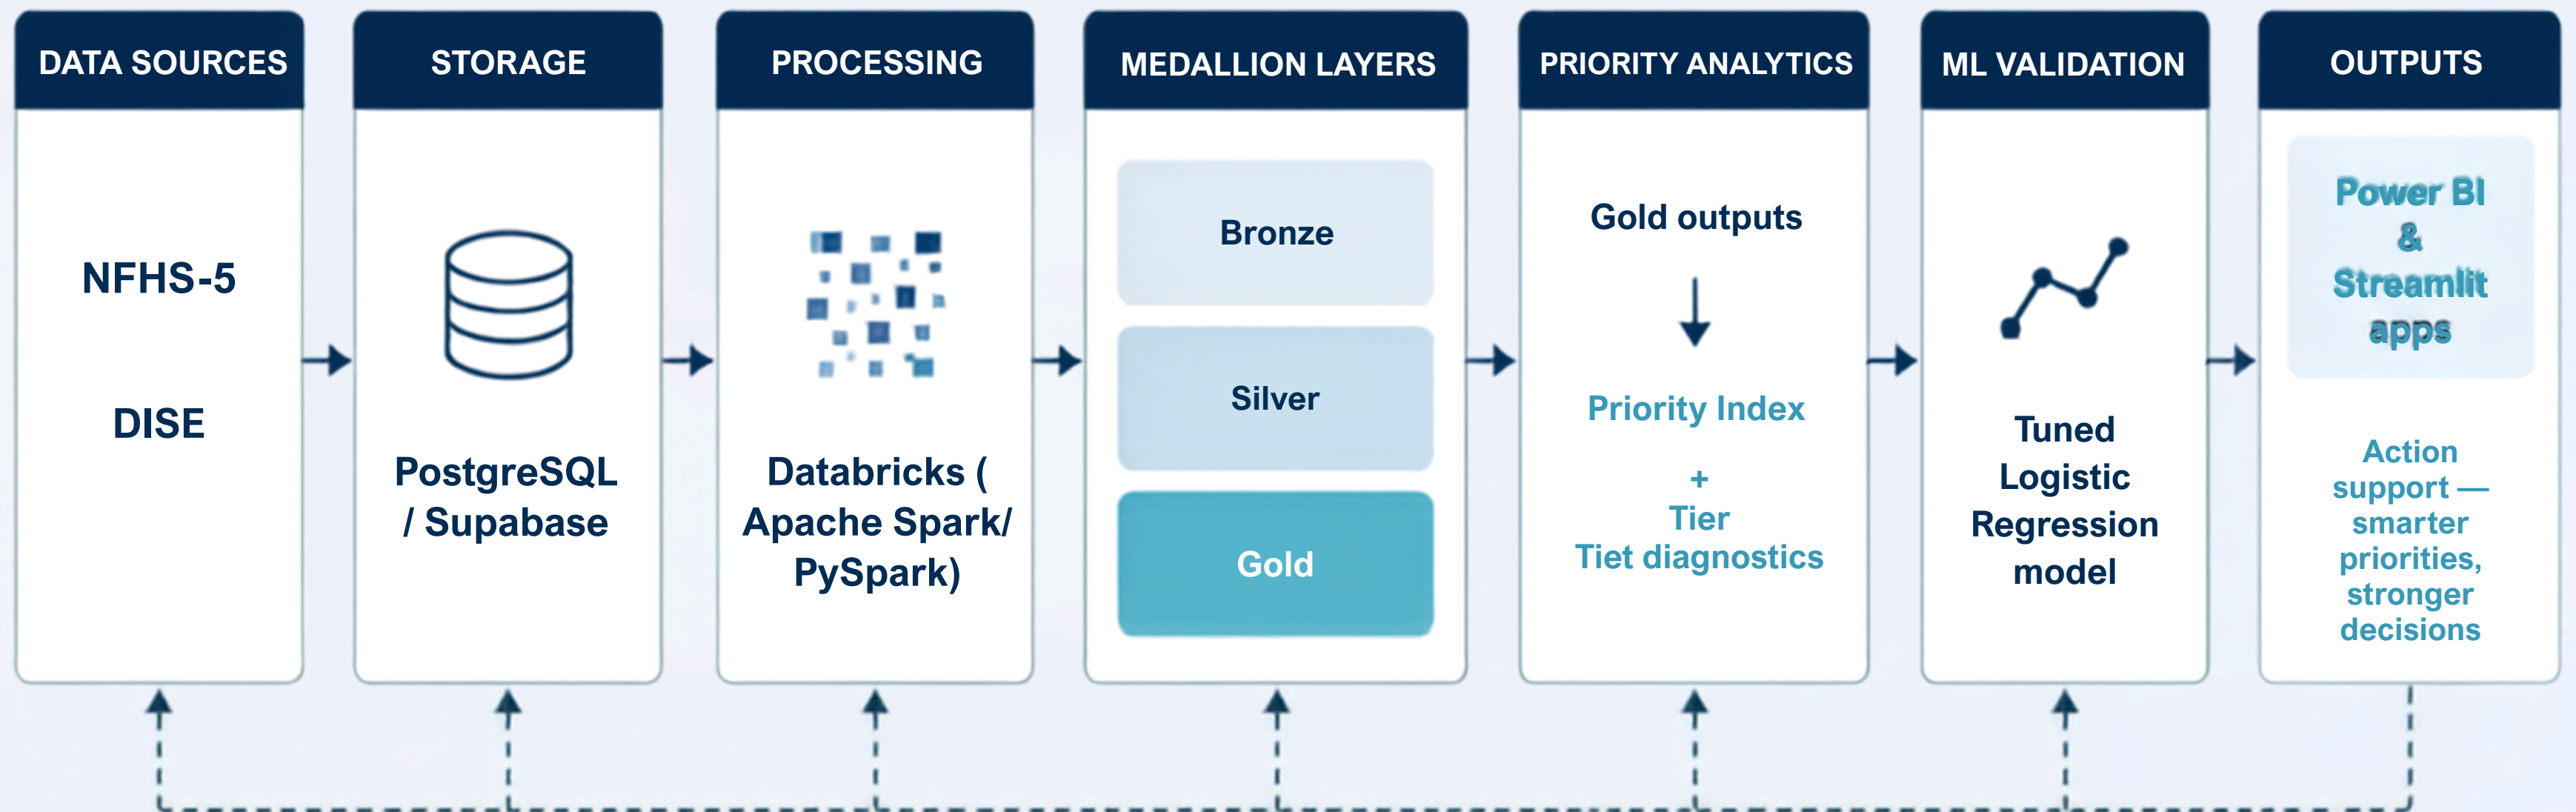

District Administrators / Analysts

compare districts, benchmarks,
priority drivers

Solution Approach

System Architecture

Action support — smarter priorities, stronger decisions

Thank You

DHEIS turns fragmented health and education data into transparent, evidence-based priorities for better-informed human decisions.

Supports evidence-based decisions;
does not replace human judgment or
automate funding.
